Program Installation

1. Download and run the file **Setup14LG.exe**, located at <http://evsoft.us/version14.shtml#gecko>
2. The installation program should now progress smoothly to completion. To start the program, look for the **Poultry Register V14** icon, and double-click on it.
3. If you are trying the demo version of the software, you're ready to start. If you have purchased the software, you should now register it in accordance with the instructions you received in the email regarding your purchase.
4. Now that you've installed the software, let's move on to the next section, where we cover some of the important basics about using the program.

Getting Started—Important Background Stuff

We think that you'll find the program very intuitive and easy to use, but, to help ensure success, we recommend that you take a few moments to read these paragraphs that describe important features that are used throughout the program.

Selecting item(s) from a list

You select items (animals, winnings, clutches, etc.) just like any other modern Windows program. To select a single item, just click on the item. It will become highlighted on the screen. To select a group of items that are adjacent on the list, click on the first item, then hold down the **Shift** key, and click on the last item. They all will become selected. To select more than one item, but select them one at a time, click on the first item, then depress the Control key (**Ctrl**) and click on each individual animal.

Entering Dates

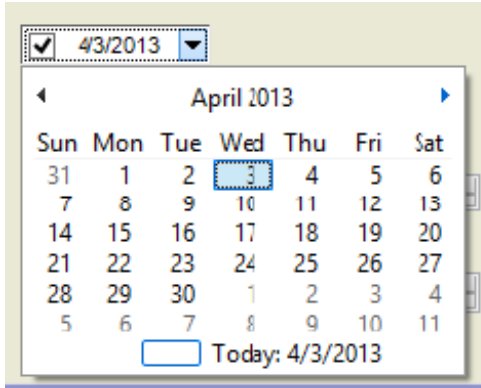

To enter dates we supply a calendar control. You can just type in the date if you want: click to the right of the checkbox, and start typing; but the calendar makes it easier. Here's a picture of one as it first appears on the page:

If a date has already been entered in the date box, the checkbox on the left will be checked. To remove a previously entered date, uncheck the box on the left—it then will be grayed out as shown in the example above.

To select the currently displayed date, just make sure that the checkbox is checked. To change the date, click on the dropdown button, which will open the calendar. When the calendar is first opened, it looks like the image at the top of the next page (depending upon your version of Windows, the appearance may be slightly different). You can pick any day in the currently selected month by clicking on the date. To move forward or back one month at a time, click on the left or right arrows.

To directly select any month from this year click on the month name. A list of months will appear, that allows you to select any month from the currently selected year. In some versions of Windows there will be left and right arrows on the month selection list. To change years one at a time, click the left or right

arrows. In other versions of Windows, click on the year shown on the calendar itself, and 'scroll up' and 'scroll down' buttons will appear that let you move forward and back one year at a time.

Sometimes you will have a date hatched that is partial, such as Summer 2017. To enter this into the program, select an approximate year, month and day that is within the correct time frame, then right-click on the calendar, that will bring up a menu that allows to just display the year, or the year and month, or the year and season.

Entering Weights

By default, the program stores gecko weights to 1/100th of a gram. You can change the weight units and resolution by clicking on **Options, Weight Units** on the Summar Screen.

Entering Numbers

Entering numbers is straightforward, just type them into the box. We also provide those little up/down arrows on the right side of the box, and you can use them to increment the numbers up or down.

Getting Started—The 4 Major Screens

The Summary Screen

This is the screen that greets you first after the program has started, and is the screen that controls how the program works and what the program shows you. You will spend a lot of time looking at this screen! Here's what the top left corner looks like:

Let's define some terms:

- **Menu Bar:** The line near the top that begins **File Edit Display**
- **Tool Bar:** That's the line of icons that begins with the buttons captioned **View Income My Journal Add Gecko Add Pedigree**
- **Control Bar:** The line that begins Active {Breedname} **Geckos,**
- **Summary List:** The table that fills the rest of the screen

The Menu Bar is what you use to change settings in the program that are infrequently used. It also provides access to the Master Breeding List, which displays all active incubations.

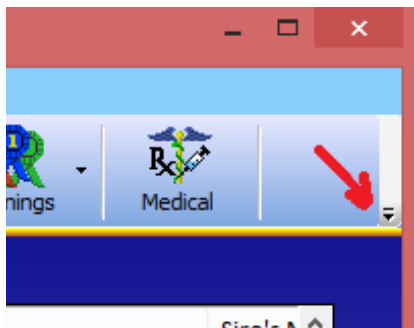

Use the Tool Bar to access the most commonly used features in the program. We will talk about some of these icons in this manual. But the most important icon of all on this screen, and you will see it on many of the other screens, is this one that features a life preserver and looks like this:

Clicking on this icon will bring up detailed information on the presently selected screen, and allows you to search the entire built-in help manual for answers to your questions. These built-in help screens provide FAR more information than is contained in this introductory booklet. Please use them as your first source of information about the program. Because the program contains over 100 different screens, and because we can't think of every question that might be asked, if you find that a help screen that is either missing completely, or is not very helpful, do not hesitate to contact us, so that we can improve the built-in help.

On older and/or smaller screens, not all the icons will fit on the screen at one time, so you may have to click over on the right side, shown below where the red arrow is pointing, to see the rest of the icons.

(I drew the red arrow, to help you find the drop-down button in the picture, the red arrow will NOT appear on your computer screen)

OK, on to the **Control Bar**. It looks something like this:

This feature regulates what you see in the Summary List. Clicking on any underlined item brings up a list of choices. So, clicking on **Active** will allow you to pick from choices like **Archive, For Sale Animals, Sold Animals**, and so on. Clicking on **C. Ciliatus** brings up a list of all of your breeds and gives you the ability to add a new breed to your herd. (Note that you can display breeds either by their common name or their scientific name by clicking on Options, Alternate Breed Lists on the menu bar).

The Summary List, by default shows all the animals of the selected breed that are currently in your herd. You can choose to show as many or as few columns of information as you would like. We give you a list of 20 different types of data to choose from, just click the **Customize Table** icon.

You will see a list of all the possible choices. Click the left icon on the list to include it on the screen, click the right icon to include it on your inventory

While on the Pedigree Screen, click on the Adj. Display icon to select between:

Standard view: males in blue, females in red.

Colored by variety: — the boxes are colored by the color of the animal.)
this feature only available for breeds that have defined color lists)

Line Breeding Coefficient: the coefficient is shown in each box, unique animals are grayed out

Inbreeding Coefficient: the coefficient is shown for the root animal, ancestors that appear in both the maternal and paternal trees are shown in color, all others are grayed out.

Photo Pedigree: a family portrait, with each animal's picture shown instead of the text data.

Right-click on any animal to:

Change the color of the box on the screen

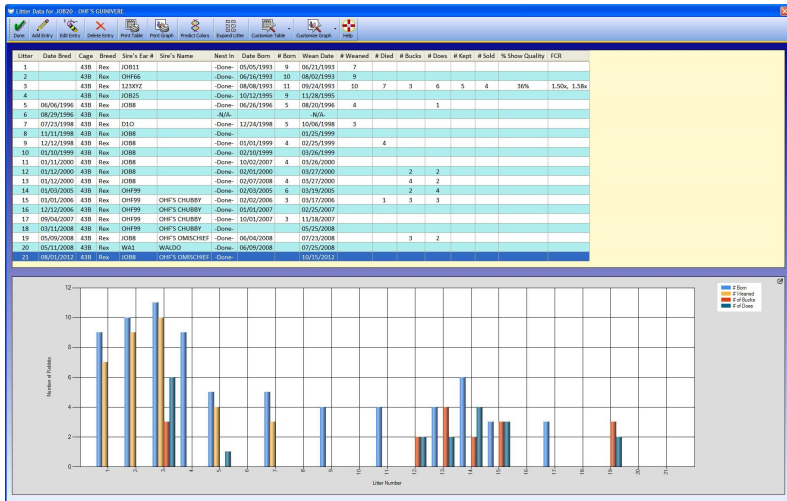

Highlight its occurrence(s) on the pedigree

View that animal's pedigree.

This is the same screen that you use to enter full pedigrees, both when you first get the program, and later on, when you are entering the pedigree of a newly-purchased gecko. We will cover that process in detail in the topic entitled Entering a Pedigree

.

The Clutch Data Screen

The Clutch Summary Screen has two main sections. The upper section is a table that contains one line for each clutch. The lower section is a bar graph in which you can select to display any of the parameters listed in the table, for instance, number born, number weaned, number of males, number of females and so on.

At the top of the screen is a menu bar which provides you with the ability to add rows to the table, edit the table, print the table and so on.

An important button is the **Expand Clutch** button. When clicked, it takes the currently selected clutch and automatically enters the animals from that clutch into your animal database and creates pedigrees for the animals in the clutch.

As with all the major tables in the program, you can select which columns of data you wish to display, and the order in which to display that data.

The Master Breeding Screen

This screen is reached by clicking **Master Breeding List** on the menu bar. This feature lists all clutches and the days of incubation of that clutch. As with the other major tables, you can adjust the number of columns shown and their order.

Entering Data

Introduction

When you first get the program, you will be anxious to get some data entered. Please take the time to do this in the order we recommend, in the long run it will make your life MUCH easier. Here's how to begin: click on **Select My First Breed** on the Control Bar, a screen will appear that shows all of the breeds currently in the program. (If you raise a breed that is not on the list, write to us and we will add it.) Pick the one that you'd like to work with first. Then click the **Accept** button. You can return to this screen at any time to change to another breed. Data is entered separately for each breed of gecko, so you only work with one breed at a time, but you may have as many breeds as you want, and you can quickly change the currently selected breed.

Entering Pedigrees

1. Enter the pedigrees of your breeding stock, starting with the pedigrees of the oldest generation in your herd. At this time, **DO NOT PUT IN ANY ANIMALS USING ADD GECKO**, always begin by entering the complete pedigree of an animal using the Add Pedigree function, reached by clicking **Add Ped** on the Summary Screen.
2. Clicking the **Add Ped** button brings up the Pedigree Screen that we talked about previously. It will display a blank pedigree, with the leftmost animal (we call that the 'root animal',) displayed in yellow, and on the right side of the screen is a box where you type in what you know about that animal.
3. Type in everything you know about the yellow animal, copying it from the paper pedigree that you have. Use the **Tab** key to move from field to field.
4. When you have typed in all that you know about the first animal, click **Next Gecko**. The program will take everything that you've typed, place it in the yellow box, change that box's color to red or blue depending upon the sex of the animal, and highlight the next box in yellow.
5. Repeat steps 3 and 4 until you have typed in all the animals on this pedigree. At this point you can either click **All Done**, which will take you back to the Summary Screen, or you can click **Next Pedigree**, which will clear the screen so that you can start entering another pedigree, by repeating steps 3 & 4.

Entering Clutch Data

The Clutch Data Screen is where we display breeding records for each female. This screen shows each time the female was bred, to whom she was bred, when/if eggs were laid, how many were hatched, how many died, how many were males, how many were hens, and so on. Clutch data is always entered for the female, but can be viewed by either the female or the male. To access this area of the program, click on an animal, so that it is highlighted. Then click **View Clutches**. That brings up the Clutch Data Screen. When you first view it, it will be empty. To enter a breeding, click the **Add Entry** button. This brings up the Clutch Data Entry screen. For entering historical data, fill in all the fields that you wish and click either **Done** or **Add Another**, which lets you add another clutch for the same female. For a new breeding, just enter the sire and the date bred, and click **Done**. Then later, you can return and edit this clutch to add data like date laid, date hatched, number hatched, sex of the offspring, and so on. All of the data entry boxes are standard date and number boxes, as described in the first part of this manual. But the Sire Info box is special, so let's look at it, and talk about it for a bit. It looks like this:

Most of the time, the sire will be in your database. In this case, leave **Known Sire** selected. If you know your animals by name, rather than ear number, then select **By Name** from the drop-down. Then start typing in the data box. The program will show you names or ear numbers of males currently in your herd that are similar to what you are typing. Select the one that matches.

Sometimes, the animal is in your herd, but you haven't entered him into the database yet. In that case, you can click the **Add....** button, and enter him right now. Then select him from the list, as above.

If the sire IS NOT in your database, and you don't have his information handy, select the **Unknown Sire** button—this will allow you to enter some reminders as to who the sire is, so that later, when you get his pedigree, you can enter that pedigree into the program, then come. Back, select **Known Sire** and pick him from the list.

There are two other check boxes that are provided for rare, special cases. If you are entering historical data, it is possible that the sire is now dead, and therefore in your archives. In that case check the **Show Archived** box, and you will see *all* males in this breed. The **Show All Breeds** checkbox is useful when entering a cross-breed breeding, as it will cause the program to show you all the males from all breeds.

Using Add Gecko

OK, so I sort of said you shouldn't ever use Add Gecko. Well, turns out I lied. There are two times when it is OK to use Add Gecko:

- 1: If you have a gecko and have no idea who its parents are, but you want to keep track of it in the system. Then use Add Gecko to put in that animal.
- 2: To put in a new clutch of animals, whose parents' pedigrees are already in the program. You would only do this *only* if you do not keep clutch data records in the system, because using the Expand Clutch function that is available on the Clutch Data Screen is faster and easier than this method. See the data on Entering Clutch Entry on page 13 for that method. But, if you don't keep clutch data, then to add a new clutch:
 - Select both the sire and dam on the Summary List.
 - Click Add Gecko. The program will bring up the Detail Screen and enable it for data entry. The sire and dam information will already be filled in.
 - Enter the name, color, ear number, etc. for the first gecko.
 - click **Add Another**. The program will ask if it is from the same clutch. If you click **Yes**, it will fill in the sire, dam and date of birth, so you don't have to type it again.
 - Repeat until done.

Printing the Important Stuff

Printing Pedigrees

This is a pretty lengthy subject, so I'm going to split it up into a couple of smaller topics. Here's one other point that I should mention. Most of the other items you choose to print will, by default, be made to, in some way, match the format that you choose for your pedigrees. So be sure to set up how you want your pedigrees to look before you do something like design your business cards.

Picking the Pedigrees to Print

There are 2 ways to select the pedigrees to print.

1. Click on an animal, click **View Ped**. This brings up the Pedigree Display Screen. Check to make sure that you only see red and blue boxes. If you see yellow boxes, then you know it is an incomplete pedigree, and maybe you don't really want to print it. If the displayed pedigree meets with your approval, then click the **Adjust & Print Ped** button on the toolbar. This brings up the Pedigree Printout Setup Screen.
2. Select one or more animals from the Summary List. Click the **Print** icon. Select Pedigrees. This will also bring up the Pedigree Printout Setup Screen.

In either case, but especially if you used option 2 and picked more than one animal, it can take quite a few seconds for the program to bring up the Pedigree Printout Setup Screen, because it is doing a LOT of work drawing up a picture of what your printed pedigree(s) will look like, so please be patient.

Selecting Your Pedigree Style

The program provides you with 6 basic styles of pedigree:

1. Pre-Sale. The upper left corner of the pedigree has blank lines for you to manually fill in the buyer information at the time of sale.
2. Post-Sale. The program prints the buyer information on the pedigree. If you have not already specified the buyer, it asks for the sale information and attaches it to the animal in addition to printing it on the pedigree.

3. **Non-Sale.** Nothing is printing in the upper left corner of the pedigree.
4. **Multi-Mini.** Prints the pedigrees of up to four animals that you have selected onto one sheet of paper. Regardless of how many animals you have chosen, the program will print each pedigree on 1/4 of the page.
5. **Breeding Certificate.** Looks just like a regular pedigree, but in the upper left corner says 'This male bred to:' and provides a space to write in the sire info.
6. **Photo Pedigree.** A family portrait pedigree. Prints each animal's picture, captioned with it's name or ear number.

Selecting Your Pedigree Format

Under the **Adjust Format** icon are many different choices for adjusting the look of your pedigree. Most are self-explanatory, a few might not be obvious. The best thing to do is just pick one, click the **Preview Pedigree** icon, and see if you like the look.

Hint: one easy way to make your pedigrees different from everyone else's pedigrees is to pick a different Header Font. Just click the **Select Header Font** button and find one you like. Then maybe make it a different color.

The **Select Colors** icon gives you control of the coloration on the printed pedigree, and you can see those color changes when you click the **Preview Pedigree** icon. Note that the colors of the boxes on the actual Pedigree Display Screen are NOT affected by how you color your printed pedigrees. Also, when you export a pedigree, it does NOT follow the coloration and style of your printed pedigrees. Windows provides a lot more ability to control printed pedigrees than on the exported pedigrees.

To include a picture on your pedigree, click the **Add/Edit Picture** icon. You can either have a small picture, located in a 2 inch by 2 inch square between the sire and dam, or a full page image. You can also specify whether you want to use the picture of the animal that is leftmost on the pedigree, so it's different on each pedigree, or you can specify a single image to appear on every pedigree. If using a single image for every pedigree, the program stores that image separately for each breed. That way you can use a club logo or representative picture of the breed, and it will automatically be correct for each pedigree you print, regardless of which breed is selected.

A Word About Paper Size and Pedigree Size

The program will attempt to fit the pedigree style that you have selected onto whatever size paper you have selected. It will print one pedigree per page, with the exception of the Multi-Mini, in which it will fit 4 on the page. Obviously if you decide to print a Multi-Mini, 4 generation pedigree on a 3x5 card, the print will be too small to print legibly and read, so plan accordingly

Printing Inventories

This is an easy one. You have two choices, you can select individual animals, or you can print all the animals in the currently shown area on the Summary List. Even if your Summary List is long, and you have to scroll on the screen to see all the animals, your printed inventory will automatically include them all. So, as usual, start on the Summary Screen. If printing just selected animals, pick them first. Otherwise, just click the **Print** icon and pick the kind of inventory you want to print. A preview screen will then appear, and you can decide from looking at the preview what columns you want to print, what paper orientation and size you want.

Band #			When you click Select Columns you will see the menu shown to the left. There are two columns of check marks. The left column shows what you currently have selected on the Summary Screen. The right list is what you have selected to print.: Be sure to check/uncheck the items in the RIGHT column that you want to have appear on your inventory printout.
Sex			
Name			Don't forget to watch the right side of the page on the preview, to be sure that everything fits. If you pick too many columns, it will spill off the end and not print at all — stuff that spills off the right side of the page is lost.
Date Hatched			
True Age			If you are printing in Portrait Mode, and want to print more columns, switch to Landscape Mode.

Designing and Printing Business Cards

Helpful Hint: Before you design your business cards do two things:

- 1, Design your pedigrees.
2. Enter your web and email address information into the program under **Options, Personal Settings, Update Web & Email Info.**

This is because when you design your business cards, it will ‘carry in’ the style you laid out for your pedigrees –so doing them first makes your life a bit easier — you won’t have to work hard to make your business cards match your pedigrees, they will match.

Start on the Summary Screen. Click the **Print** icon and select **Business Cards**. The Business Card Setup Screen will (slowly) appear. Click the **Adjust Format** icon and proceed through each of the menu choices, *in order.*, as follows:

of Cards per page. Your only choices are 8 or 10. The program will print on either of these 2 standard business card sizes, no other. All cards are 2” x 3-1/2”, most are 10 to the sheet. Some are 8 per sheet, for use in older/cheaper printers that can’t print close to the top/bottom edge of the paper.

Style. You have 4 choices here.

1. Text only (= no picture on card)
2. Left-Justified Image
3. Right-Justified Image
4. Centered Image. This is the only one that might need a word of caution. If you opt to print a centered image, the text will print over it. So you’d better pick an image that is pale, and a text color that is dark, because otherwise the printed text won’t show. Don’t forget that your printer can’t print white — we get a lot of tech support calls where folks are expecting their printers to print white, which really means they print nothing at all!

Information Shown. Here you step line-by-line through your card, deciding what information you want to have shown on your card. For each line you will pick the information you want shown on that line, and the font and color for that line. Please note that the program stores the actual information. So, if for instance, you put your caviary name on line 1, and then 2 years from now you change your caviary name, you will have to come back here and reprogram that line. Remember that if the line is too long, you may be able to get it to fit by making the font size smaller for that line.**Margins.** This is last, and, frankly, can be a bit of a pain. We try to get it right to begin with, but, especially with Windows 8, sometimes we are unable to exactly predict where

your printer is going to print. So, here's what to do:

1. Make a test printout on plain white (cheap) paper.
2. Place the printout behind a fresh sheet of business cards and hold it up to the light. If the alignment is wrong, adjust the margins accordingly. Making the top margin bigger pushes the printout down. Making the left margin bigger pushes the printout to the right.
3. Make another printout on cheapo paper and repeat step 2.
4. Keep repeating 2 and 3 until the printout is good.

Now you're ready to print for real. Put in the good paper and click the **Print** icon. All of your settings will be saved, so the next time you need to print business cards, all you will have to do is come to this screen and click the **Print** icon.

Printing Cage Cards

As always, start on the Summary Screen. Select the animals for which you want to print cage cards. Click the **Print** icon. This brings up the Cage Label Setup Screen. If this is your first time here, click the **Adjust Format** icon and follow these steps:

1. Select your printer (it's probably already selected)
2. Select the size of the paper you are going to be using. Note: unless you are printing 1 card per page, the size of the paper is different from the size of the card/label.
3. Select the number of cards/labels you want to print per page
4. Select each line that you want to print.

As you proceed, sometimes the program will automatically redraw a preview image of the labels, but most of the time, when you want to see how your design is progressing, click the **Preview Printout** icon.

While the program will attempt to adjust your text size to fit your labels, keep in mind that it won't generally choose a font size smaller than 8 or 9. So there's no way you can print 8 lines of text on a 1 inch tall label. So either pick the most important lines to print on your small labels, or pick larger labels/cards to include everything you want to print.

Most folks use the labels that come 30 to the page (Avery 5130/5160 are typical numbers), and print 4 or 5 lines per label. Some folks print one animal or two animals on 3x5 or 4x6 cards and tape them to magnets.... Whatever works for you.

There is also a special feature in the program, if you have selected **Prepare Show List**, rather than be on the **Active** list, then when you print cage cards, the program will print cards for all of animals currently selected for the show entry instead of the selected animals.

Printing Receipts/Bills of Sale

If you are printing receipts for rabbits you have sold, it's often best to print their pedigrees first using the Post-Sale format. If you are selling items other than rabbits that are listed uniquely in your database, then just start on the Summary Screen. Click the **Print** icon and select **Receipts**. This brings up the Sales Receipt Preparation Screen. Proceed as follows:

1. Click the blue button and enter the buyer information. If you have recently sold animals to this buyer, the program will ask if you want to add those animals to this receipt.
2. Specify the date of sale
3. Fill in the lines on the table with the items you are selling. Empty lines will automatically appear each time you fill up a line. Be sure to check the **Taxable** box if tax must be charged.
4. Enter a tax percentage, if required.
5. Enter whatever you'd like in the method of payment field
6. Enter the amount paid.
7. Click the yellow button to print.

How to Save \$50 to \$900

OK, I'm being tricky here, but this is REALLY important. We have over 15,000 customers and EVERY DAY we get anywhere from 1 to 4 phone calls and/or emails where folks have had a lightening strike, a fire, a power surge, or their computer just plain up and died. AND THEY NEVER MADE A BACKUP OF THEIR DATA.

So, here they are, wondering who is due to hatch, who they sold animals to, and how they are going to recreate their data. In some cases, they've had our program for over 15 years, and never made a backup of their data. So their choices are either retype it all in, if they can find the data, or pay someone to recover their data. If when the computer died, it didn't kill their hard drive, the usual cost to recover their data is anywhere from \$50 to \$150. But if the hard drive died, and they REALLY want that data (I've had a few that did), the hard drive has to be sent to a special disk recovery facility, and they typically charge \$300 to \$900 to recover the data.

Brand new computers die, old computers die, middle-aged computers die. DON'T THINK THIS WON'T GOING TO HAPPEN TO YOU. IT WILL!

So, save yourself a bundle of money. Go out, buy a \$5 flash drive and make a ritual of backing up your data every time you say 'Whew, I don't want to have to enter all of *that* again'. If you need help learning how to make a backup, call us. We're here to help, we'd much rather spend 10 minutes teaching you how to do a backup, than spend 4 fruitless hours trying to help you get your data off the charred remains of your dearly departed computer.

Technical Support

We pride ourselves on our technical support, and encourage you to use it. The best ways to reach us are:

By Phone: 413-499-0426 between 8 AM and 8 PM Eastern time.
(Please note, if you are not in the Eastern zone, it is later here than where you live. So don't call us at 11 PM YOUR time thinking we're just finishing dinner.—it's at least midnight here, we're in bed and get a tad grumpy when the phone rings that late at night!)

By Email: support@evsoft.us 8 AM to 10 PM Eastern

By Mail: PO Box 1534
Lanesborough MA 01237
